## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 9 recites the limitation "said relationship", "said position", "said logical block address", and "said predetermined distance". There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 6, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by *Kanamaru et al.* (US 6,622,206).

As per claims 1 and 6, *Kanamaru* teaches a disk drive unit (Fig.1), comprising:  
a recording medium with capability for random access (col. 6, lines 28-30);  
a command memory (col.7, lines 25-29) for storing a write command received from an external device (host system) until said write command is executed;  
a buffer memory (7, Fig.1) for storing write data corresponding to said write command;

Art Unit: 2182

a write specification control (Fig.1) for controlling the writing of said data on said recording medium; and

a first logic circuit for checking a first condition, wherein said first condition determines whether or not a free space of said buffer memory is larger than a predetermined reference value (T) that is greater than a memory space equivalent to a unit of said write data, wherein a command complete (s6, Fig.5) signal is returned to said external device, in response to said write command if said first condition is satisfied. (Abstract, col. 3, lines 6-col. 4, lines 1-16, 44-col. 18)

As per claim 2 and 7, *Kanamaru* teaches issuing a write command to write data stored in said buffer memory onto said recording medium; and not if they are not enough free space available the command complete signal is delayed.

***Allowable Subject Matter***

Claims 3-5, 8, and 10-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
